The Secret is in the Science

PersonalizedNutritionConsultants.com

Why Personalized Nutrition?

***Personalized Nutrition gives you
the most comprehensive and fundamental picture
of your personal Total Body Chemistry***

This is the story of measurement.

The results of our primary nutrition testing come from over 50 years of laboratory research and over 7 million tests. The report describes the measurement of your own mineral levels, toxicities and metabolic rate, information that every person needs to truly know HOW to best help themselves live and perform at peak levels of energy and health.

We have been led to believe that "one-size-fits-all" nutrition works and yet, nothing could be further from the truth!

Our service begins with nutritional testing to target the foundational elements of each individual's unique bio-chemical balance.

This report measures the most critical excesses, deficiencies and toxicities within your body and outlines the medically proven steps to take to correct all problems found, so you can live in radiant healthfulness. ***Direct nutritional measurement is the last secret to finally pinpointing where real and lasting health truly begins.***

Now we can stop wondering, "What's the secret to lasting health?" because we know:

The Secret is in the Science

What Total Body Chemistry Testing Accomplishes For You

We measure the intra (inside) and extra (outside) cellular content of the thirty most fundamental nutritional elements in your body and correlate their respective vitamin, fat, carbohydrate and amino synergists, along with associated zones.

We test for the intracellular/extra cellular presence for a minimum of eight toxic minerals, better known as heavy metals, including uranium and strontium.

From the above information, we derive twenty-seven "quantum comparisons," better known as "chemical equilibrium ratios," which are *the keys to rebalancing all nutritional and toxic disturbances*.

Based upon comparative nutrient profiles, we establish an individual's metabolic type and metabolic rate (Fast 1-4, Slow 1-4) including all that these types and rates indicate.

In addition, the test:

- **Delineates the Autonomic Nervous System Balance and acid/alkaline levels**
- **Analyzes the Thyroid and Adrenal Functions and Interactions**
- **Deciphers an overall Endocrine Gland and Hormone Profile**
- **Correlates Alarm, Resistance and Recovery Stages of Stress**
- **Statistically extrapolates a (Balasopic) Disease Tendency Predictor for each individual tested (based on the comparative analysis of over 7 million prior tests in our database from over a 52 year period)**
- **Develops a personally designed Detoxification Program, utilizing a lab-customized diet and supplement program, along with preventive recommendations**
- **Scientifically compiles a list of which foods are needed, in their proper ratios, to rebalance an individual's nutrient retention pattern**
- **Establishes which foods and supplements to completely avoid at the moment**
- **Statistically realizes specific Symptomatic Profiles as related to their respective nutrient and toxic retention; determines excess, deficiency or "quantum" antagonisms causing the symptoms**

Note that our testing/intervention program is a health and human services licensed, clinical laboratory. C.L.I.A. is the Federal licensing agency controlling all medical/nutrition/genetic testing labs - hair, blood, urine, saliva, stool and biopsy). This test utilizes only lab-customized, clinically-proven quantumized supplements that are USP Grade, developed through usage by millions of people over the last 52 years.
